Use-Case Flow Specification

UC-01 - Submit Lost Luggage Claim

Project: Airport Lost Luggage Portal | **Primary Actor:** Passenger

Supporting Actors	Baggage Service Agent; Airport Baggage Scan Network
Trigger	A passenger's checked bag is not delivered at the arrival carousel.
Preconditions	Passenger can provide the booking reference and bag-tag number; the bag is not delivered; no active duplicate claim exists for the same passenger and bag.
Postconditions	Success: claim ID, matched scan timeline, recovery alert, and agent task are stored. Minimum guarantee: if no scan matches, the claim remains stored as 'Under Search' and is queued for agent investigation.

Main Success Scenario

1. Passenger selects 'Report Lost Luggage' in the portal.
2. System requests booking reference, passenger surname, and bag-tag number.
3. Passenger enters the identifiers, itinerary, contact details, bag description, delivery address, and optional supporting images.
4. System validates booking ownership, bag-tag format, mandatory fields, and absence of an active duplicate claim.
5. System displays the completed claim for review; Passenger confirms the declaration and submits it.
6. System creates a unique claim ID, timestamps the claim, and sets status to 'Submitted'.
7. System cross-references the report against unrouted scan logs from all connected terminals and transit hubs.
8. System links the matching bag timeline, sets status to 'Located - Recovery in Progress', generates a recovery alert, and assigns an agent task.
9. System displays the claim ID and status and sends the Passenger a tracking link. The use case ends successfully.

Alternate Flow A - No Matching Scan Found at Step 8

- System sets the claim status to 'Under Search' and assigns it to the Baggage Service Agent queue.
- System subscribes the claim to subsequent scan events so new matches are checked against the bag tag and itinerary.
- System informs the Passenger that no current scan match was found, displays the claim ID and tracking link, and ends the use case with the claim active.
